Instructions

How to run my solutions:

To run locally on version n with p number of peers, use the following command:

```
make run VERSION=n PEERS=p
```

To run on docker on version n with p number of peers, use the following command:

```
make drun VERSION=n PEERS=p
```

Note that after running the previous command, use the following command:

```
make kill
```

to stop and remove any containers.

The project has the following structure:

```
├── README.md
├── lib
